Gofleet Transit Solutions

Comprehensive solutions for tracking and monitoring bus and shuttle operations

Implementing a bus management solution can help operators to improve their operations and ability to improve the response time for incidents by **84%**

ZenBus and ZenShuttle are Gofleet's intelligent and user-friendly school and shuttle bus tracking and monitoring solutions for passengers, parents, and operators. Our solution provides complete transparency between parents, passengers, and administrators by helping them track and monitor real-time data about bus location, driver activity, and vehicle performance. It provides bus operators with detailed insights into their operations, helping them make informed decisions, improve performance, and reduce operational costs.
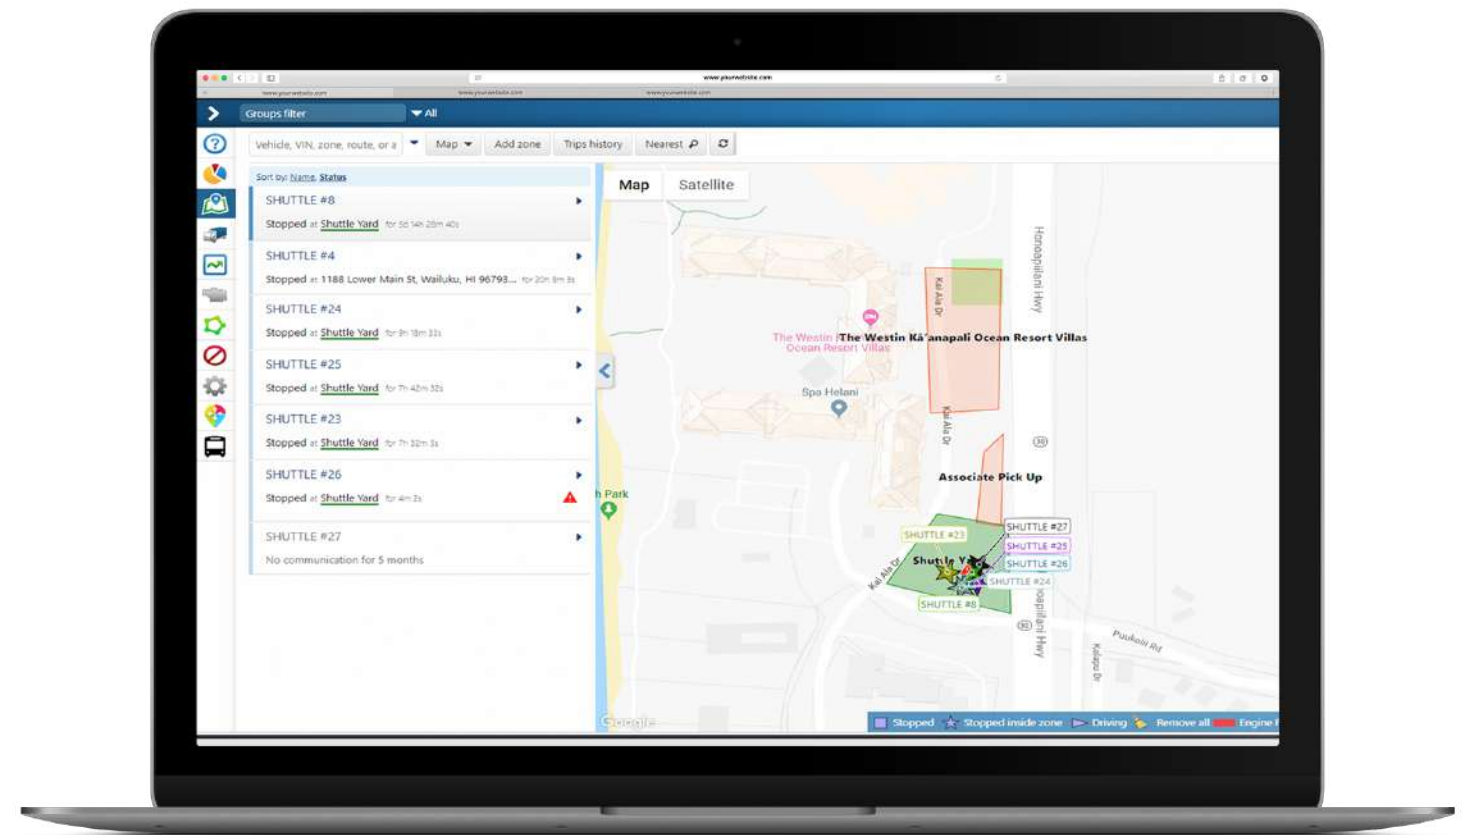

Key Features

Route optimization and Geofencing

Easily create or import custom routes, to optimize bus routes and avoid unnecessary delays. Enable Geofences to create custom defined areas and provide instant alerts when buses enter or exit those areas

Passenger App to Boost the productivity of your shuttle operations

The solution helps operators to easily create routes and schedules, and send real-time information about the bus and its location directly to passengers

Wide-ranging compatibility with legacy systems

The bussing solutions are compatible with all bus types, broader range of devices and infrastructures, resulting in scalable and low-cost installations for fleet operators.

Generate insights using reports

Powered by ZenduReport, ZenShuttle creates curated reports for all trips and performance-related data to build powerful visualizations and generates high-value insights.
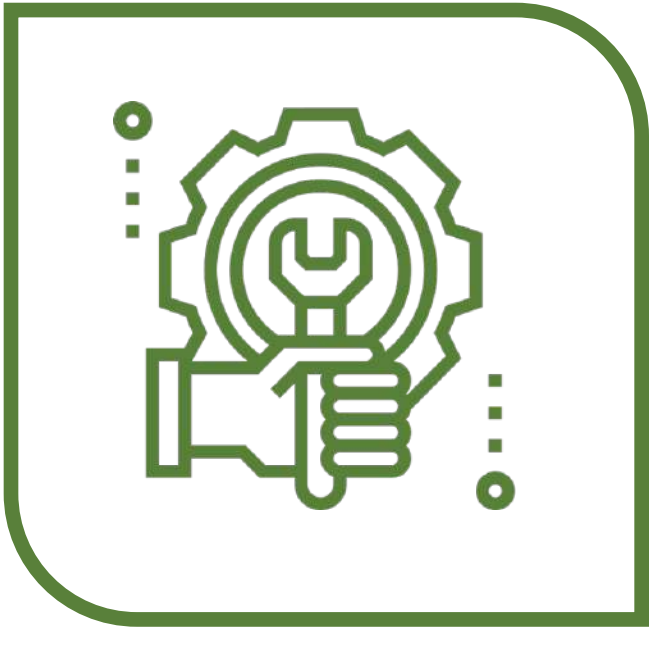

Accurately plan journeys with real time location updates

With intelligent real-time location of shuttle buses, including arrival and departure times for each stop, ZenShuttle empowers passengers to plan their journey from their Android devices

Benefits

Wide-range compatibility and easy setup

Scalable solution with seamlessly connectivity with existing legacy hardware for customized requirements

Real-time school bus tracking for parents

Easy access to your child's bus location with real-time ETAs and automatic notifications

## Bus management and maintenance for operators

Provides maintenance reports, including insights on fuel consumption and engine health, for better management

Ensure compliance

Full transparency of bus operations ensures accountability for drivers and school administrators
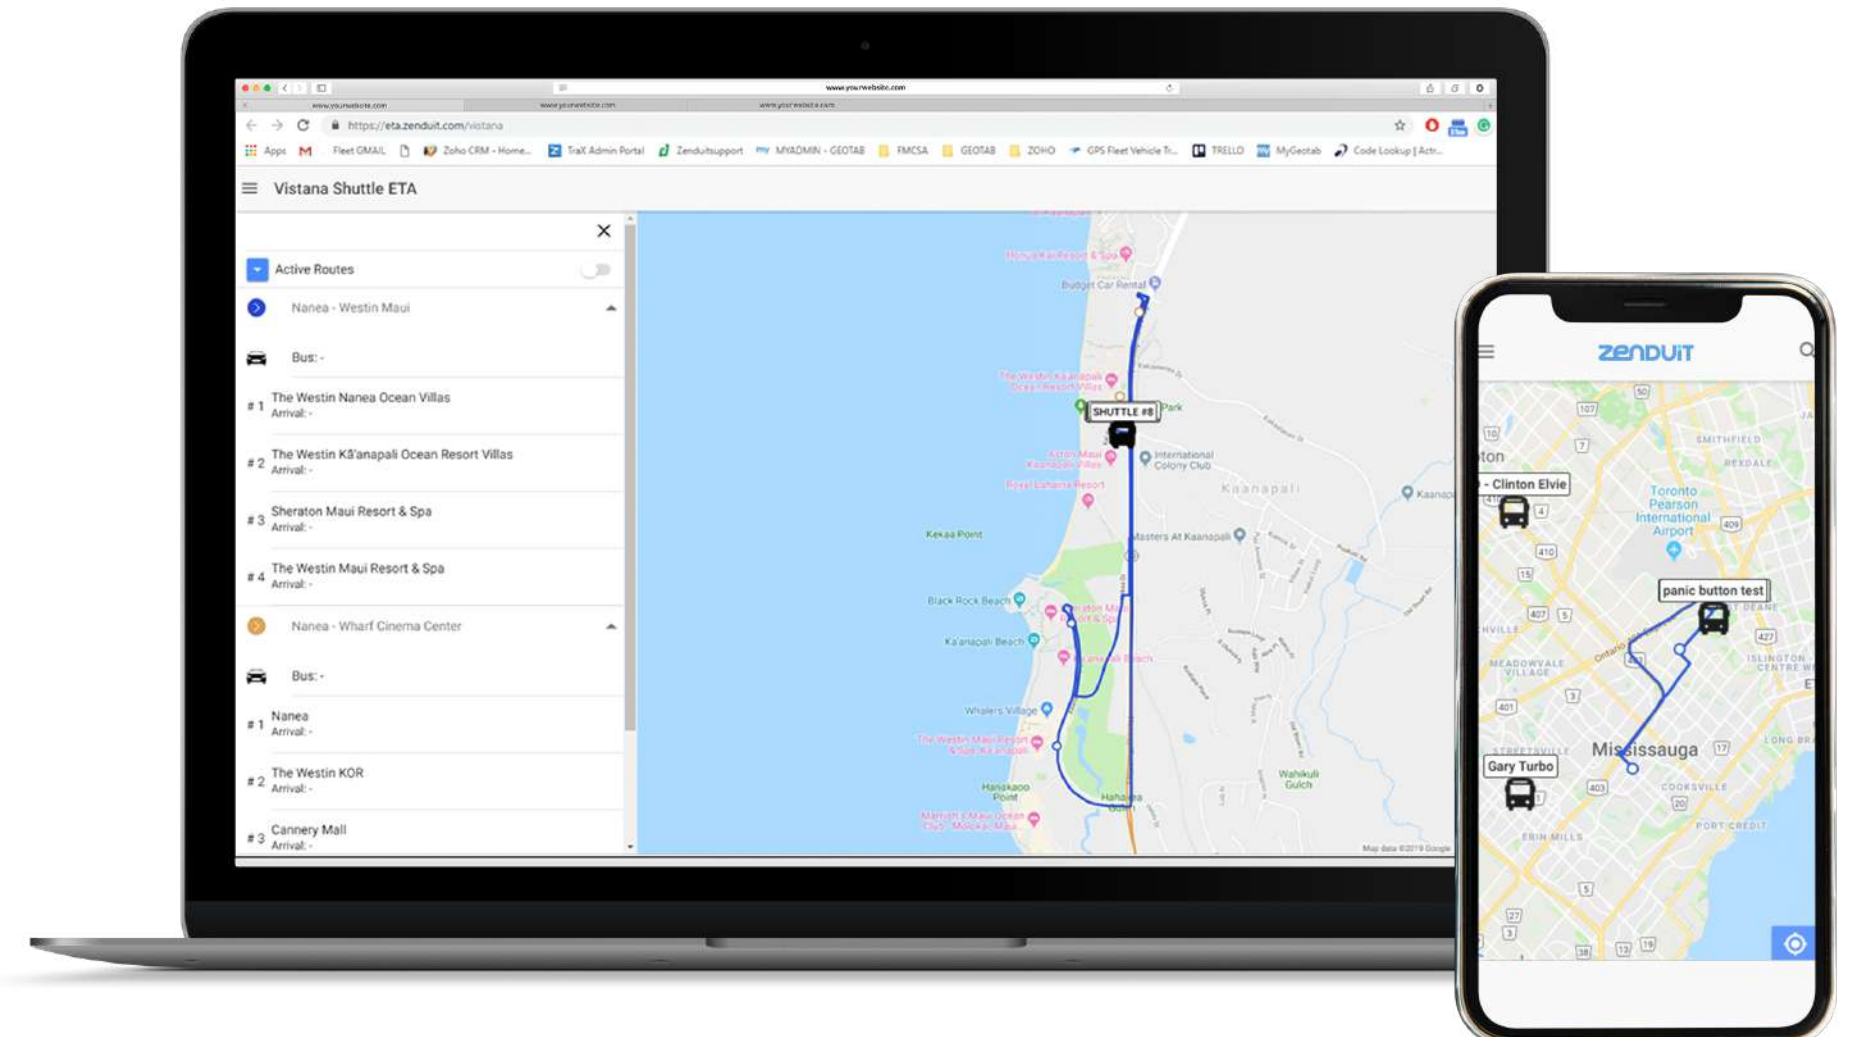

Solution Portfolio

ZenBus

Share the school buses position with the guardians through an intuitive mobile application

A simple yet powerful School bus solution to share with guardians the bus location.

ZenShuttle

Provide live location updates of arriving buses, as well as real-time updates of arrivals/ departures for various bus stops.

Geotab GO9

Enhanced OBD-2 port fleet tracker: faster processor, more memory, gyroscope for advanced vehicle support, improved fuel usage, and EV compatibility.

IOX- NFCREADER

IOX-NFCREADERA enables real-time vehicle monitoring: drivers link to vehicles via NFC and Geotab GO, allowing managers to track locations and identify operators, enhancing driver accountability.
