

## ZenduWork

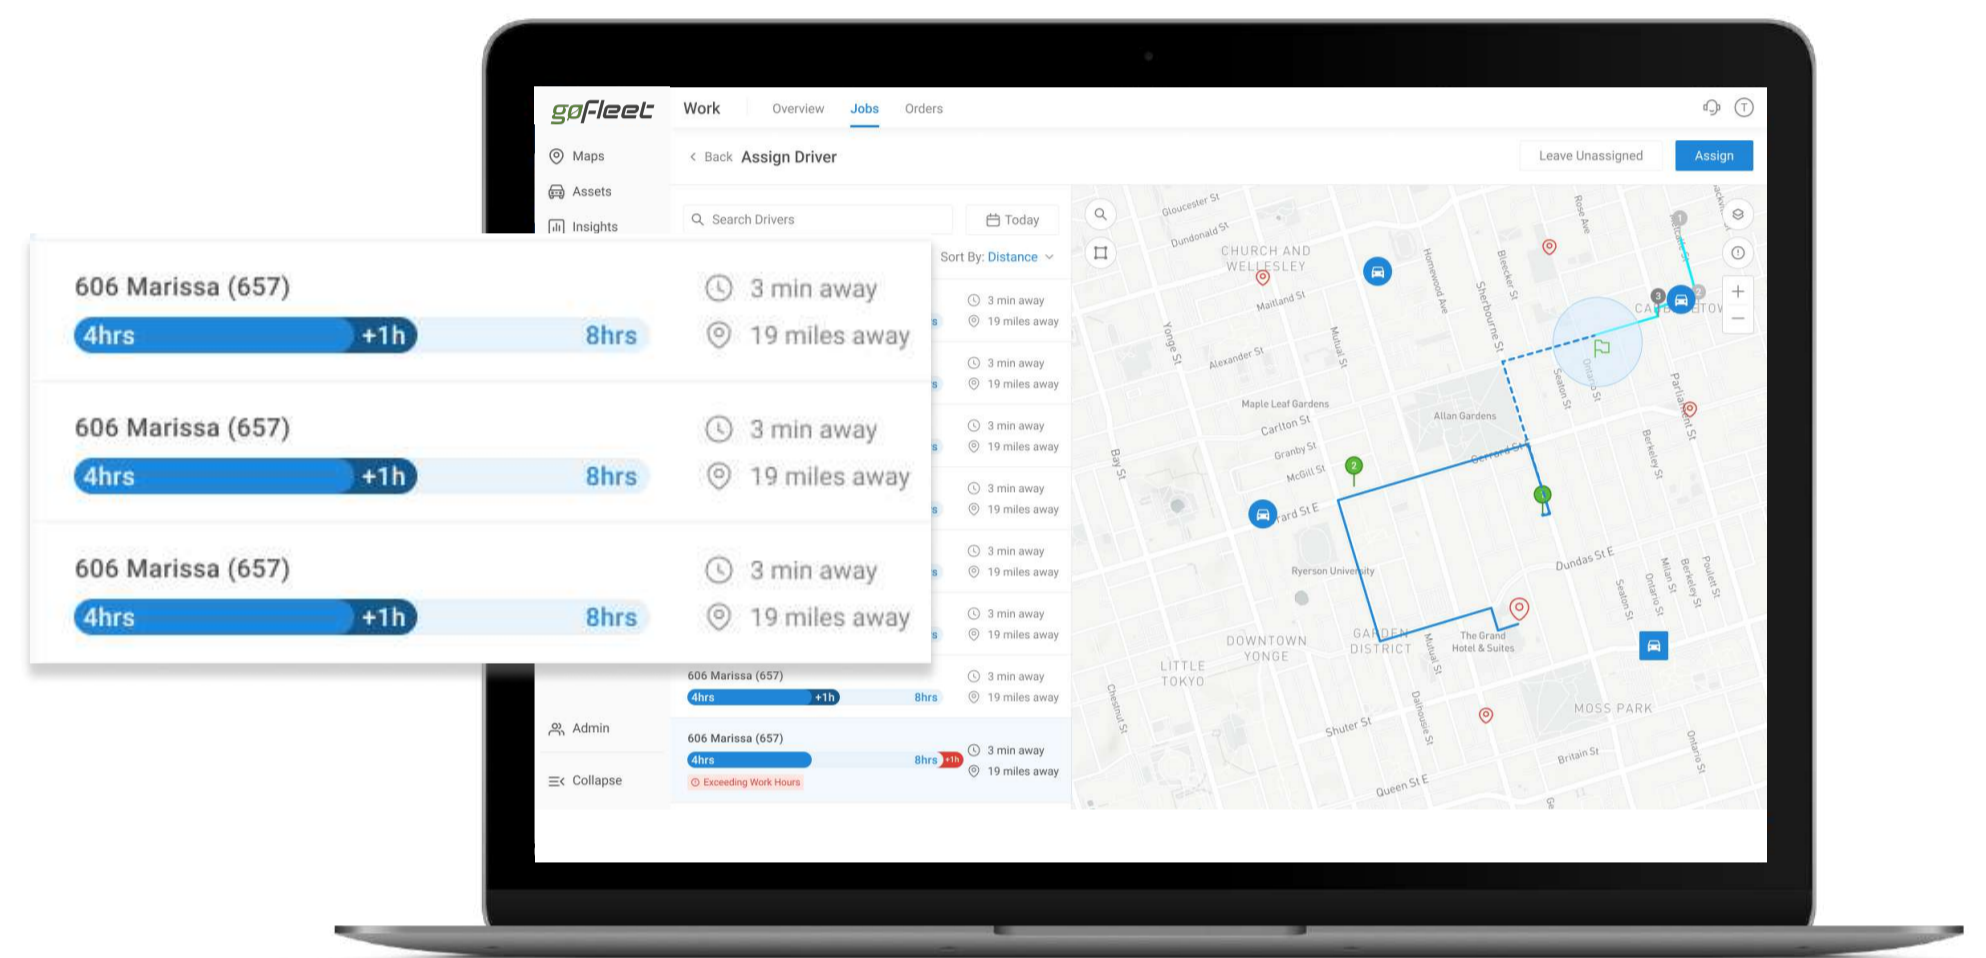

### Comprehensive Job and Work Order Management Solution for Better Visibility into Operations

Adoption of a work order management system, help enterprises to efficiently monitor and track service requests and gain real-time updates on their work orders. Integrating digital job and order management in maintenance results in a **20% reduction in equipment downtime and material costs.**

ZenduWork is a next-generation work order management solution that leverages ZenduCAM's systems, processes, and domain expertise to optimize the process of scheduling, dispatching, and completing job orders while efficiently managing your fleet, deliveries, drivers, vehicles, and customers.

It enables facilities managers to effectively track and manage the assignment and fulfillment of all work orders across a multi-location enterprise from a centralized location.

## Key Features

### Management Made Easy with Calendar View

Achieve real-time indoor and outdoor visibility, helping them locate assets and workforce with an accuracy radius of around two meters and without latency

### Mobile App to Carry Out your Work Orders Remotely

Provides real-time updates on temperature change and deviation and offers real-time and historical temperature reports and ETAs with your customers

### Customizable Forms to Capture Critical Insights

In-depth dashboards and planning tools allow you to isolate individual assets to track their expenses and repair costs over time enabling you to make informed and cost-effective decisions

### Automated Reports for Better and Prompt Responses

Robust, maintenance-free sensor infrastructure with built-in telemetry and monitoring capabilities, to remotely monitor the key positioning and condition details

### Dynamic Work Order Management

Remotely monitor and analyze the temperature and humidity status along with location details of any asset, thus helping to reduce the hours spent on manual monitoring

### Custom Integrations to Integrate your Work Orders

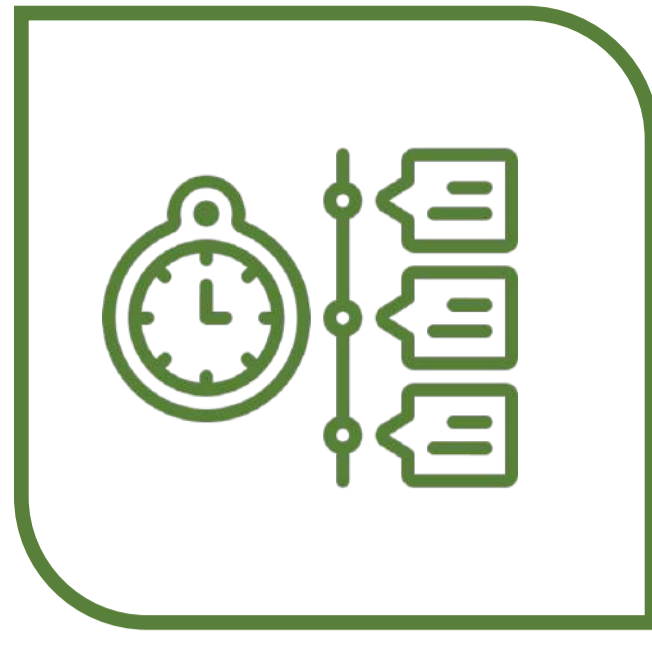

With ZenduONE, create custom integrations and connect your work order management to any third-party software for streamlining maintenance and tracking financial information.
